Let's Start!

A Small Device with a Big Capacity!

Learning Outcome:

Build the user interface, supported on the prototype assessment, determining the inputs and outputs required in the design and defining the navigation guidelines, according to the user's needs.

Identifies different hardware components and peripheral devices.

Can Do Statements:

- I can talk about secondary storage devices.
- I can explain which are the secondary storage devices usages.

Ask your partner:

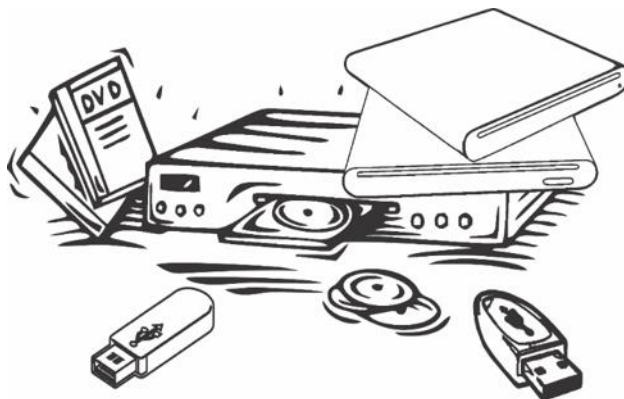

- What storage devices do you know?
- What are the most common storage devices people use to store files?

Let's Explore!

Karen needs to get some more space in her computer!

Instructions: Read the text below.

George: You look worried, is everything ok?

Karen: The hard disk icon in my computer has been showing a red bar, it says that the hard disk has been filled up. I definitely need more space in my disk.

George: You should get another secondary storage device to transfer some data and get some free space.

Karen: What do you mean by secondary storage device?

George: Secondary storage devices are items that you can use to save your data. Some people call them auxiliary or external devices. Most computers come with a hard disk to achieve digital information storage permanently since the primary storage isn't designed to store files for a long time. Once you turn your computer off, all files aren't stored unless you use a secondary storage device.

Karen: What device should I use, then?

George: It depends; there are different types of secondary storage such as flash drives, CDs, DVDs, portable devices like MP3, iPods, among others. They are practical means of storing data. Choose the one that you like the most.

Karen: Well, I've been transferring some files from my computer to some empty DVDs and I've used flash drives for this purpose as well. However, I have so many files.

George: You must take into account the usage of each device. Secondary storage devices aren't only used to save data. People have been using them to back up important information, to distribute data to other people or to carry it with themselves everywhere, just in case they need it. People have used these devices to store files for long-term preservation.

Karen: I certainly don't need to carry all that information with me all the time. I will buy a portable hard disk with plenty of space to back everything up.

George: Good idea!

**Let's Practice!****Common second storage devices**

Instructions: Select the correct answer.

1. Secondary storage devices _____ to save data.
 - a. are not only use
 - b. aren't only
 - c. is only used
 - d. aren't only used
2. Once you turn your computer off, all files _____ you use a secondary storage device.
 - a. aren't stored
 - b. aren't store
 - c. are not
 - d. isn't stored unless
3. Nowadays, people _____ to carry all their data with them, even if the new technologies could help them!
 - a. aren't prepare
 - b. isn't prepare
 - c. aren't prepared
 - d. isn't prepared
4. My computer _____ to read secondary storage devices.
 - a. aren't designed
 - b. isn't designed
 - c. is design
 - d. are designed
5. My files _____ to be with me all the time, but just in case I have them on iCloud.
 - a. aren't supposed
 - b. isn't suppose
 - c. isn't supposed
 - d. are suppose

Let's Practice!

These devices are very useful to save your information.

Instructions: Read the clues. Find the words in the wordsearch below.

1. The **h_ _ _ d_ _ _** icon in my computer has been showing a red bar; it says that the hard disk has been filled up.
2. I have been saving all the **d_ _ _** in the hard disk, and it has been a big risk because this thing is very old, so I could lose all my information.
3. I have been transferring some files from my computer to some empty **D_ _ _**, and I have used other devices for this purpose.
4. I have been working with this **z_ _ d_ _ _** for the last two years, and this device has saved a lot of information.
5. I have been thinking of buying a **p_ _ _ _ _** hard disk because I have seen that this device has plenty of space to save some data
6. People have been using **f_ _ _ _ d_ _ _ _** to back up important information because they have thought that, in this way, they could save files for a long-term preservation.

Extension Activity

Which device have you used?

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for information about secondary storage devices
- Make a chart in which you write the devices that people used to use to save information and the devices that people have today.
- Write a description in front of each device.
- Share you chart with a partner.

Self-Assessment

Yes

No

- I search information about secondary storage devices.
- I make a char to compare some devices.
- I write a description for each device.

☐	☐
☐	☐
☐	☐

Target Words

- **storage** (noun): an electronic space designed to save data
e.g. The primary storage isn't designed to store files for a long time.
- **usage** (noun): way in which something is used
e.g. You must take into account the usage of each device.
- **data** (noun): information represented electronically
e.g. Secondary storage devices are items that you can use to save your data.
- **mean** (noun): way in which something is handled
e.g. They are practical means of storing data.
- **hard disk** (noun): storage device that computers have
e.g. it says that the hard disk has been filled up.
- **portable** (adjective): when something can be taken from one place to another
e.g. I will buy a portable hard disk with plenty of space to back everything up.

Learning Points

Simple Present Passive - Negative Form

You use the **simple present passive in negative** statements to express that something doesn't happen frequently.

The **simple present passive in negative** statements is commonly used when the subject of the sentence can be omitted since it is implicit in the message. If you want to mention the subject, you complement the sentence using "**by**" followed by the noun.

Let's compare these two sentences:

Active voice:

The computer does not use secondary storage devices to store drivers.

Passive voice:

*Secondary storage devices **aren't used** (by the computer) to store drivers.*

As you can see, in the **passive voice** sentence the subject "computers" is not necessary.

The grammatical structure that we follow for the passive voice in the negative form is:

Object of the sentence + **verb 'to be' + (not)** + verb in past participle.

For example:

*Secondary storage devices **are not designed** to be the main storage method.
Nowadays, paper tapes, punched cards, and magnetic tapes **aren't used** to save information.*

Examples

- *The primary storage isn't designed to store files for a long time.*
- *Secondary storage devices aren't only used to save data.*
- *All files aren't stored unless you use a secondary storage device.*

Learning Points

Secondary Storage Devices

You use **secondary storage devices** to hold data for a long period of time.

Computers need to have a way to store data and instructions. However, once the computer gets powered off, all data is cleared. When we use a **secondary storage device**, data will stay in the memory for more time.

These devices are also called external storage or auxiliary storage in order to distinguish them from the primary electronic storage ones. In the past, people used to use paper tapes, punched cards, and magnetic tapes to save information. Nowadays, we use hard disks, optical discs, flash drives or different portable devices to store a large amount of data.

Usages	Advantages
Saving files	Non-volatile devices
Back up information	Storage is expandable and portable
Transport files	Data is easily distributed
Store large amounts of data	If one device gets filled, another one can be added.

Examples of secondary storage
Hard disks, CDs, DVDs, flash drives, Portable devices, zip disks.
